    which helps to share and view the video content and enables the user to create account and
    rate the content and save the content.

Projects

- **Zero – Social media**
  (**Link: -** https://play.google.com/store/apps/details?id=com.zeromonk.zero)
  Zero is a community building app exclusively designed and developed for the students community to make their college and school lifestyle better by providing them authentic connections, mentorship, Educational social networking. Students can participate in inter and intra college events from this platform. The app is developed on Flutter and dart and for backend as a service Firebase is used. Moreover, it uses geolocation services to fetch users' location data. The app uses provider state management.
- **Pdf Generator**
  The main purpose of this app is to generate pdf and save it on the users device. It can also print the pdf connecting to a printer. User can change the data with the help of this app.
- **Title** (Ongoing)
  The App is developed on Flutter framework and uses google books API to fetch the data of the books. The App uses Firebase to store the data of the user and authenticate the users. The users can comment, Like and Share the books.
